Cost Techniques: Tools, Methods, and Practice

6-7 May 2026
450 € + TVA

About the course

This course is designed to provide finance professionals, managers, and business decision makers with a clear and practical understanding of how costs are generated, allocated, and interpreted within an organization.

By combining essential cost concepts with modern analytical methods, the program equips participants to make informed decisions that improve efficiency, support strategic planning, and strengthen financial performance. With its accessible structure and real-life examples, the course serves as a reliable foundation for anyone looking to enhance their financial insight and contribute more confidently to business outcomes.

Agenda

1. Introduction to costing
